Processes, many have requested the distribution of solutions to the problems in the textbook. This book contains guided solutions to the odd-numbered end-of-chapter problems found in the companion textbook. Student's Solutions Guide for Introduction to Probability ... Solution to Problem 1.14. (a) Each possible outcome has probability $1/36$. There are 6 possible outcomes that are doubles, so the probability of doubles is $6/36 = 1/6$. (b) The conditioning event (sum is 4 or less) consists of the 6 outcomes $(1;1);(1;2);(1;3);(2;1);(2;2);(3;1)$; 2 of which are doubles, so the conditional probability of doubles is $2/6 = 1/3$. Laurie Snell: INTRODUCTION to PROBABILITY Published by AMS Solutions to the exercises SECTION 1.1 1. As n increases, the proportion of heads gets closer to $1/2$, but the

difference between the number of heads and half the number of flips tends to increase (although it will occasionally be 0). 3. Introduction to probability solutions

manual Solution to Problem 1.8. Let p_i be the probability of winning against the opponent played in the i th turn. Then, you will win the tournament if you win against the 2nd player (probability p_2) and also you win against at least one of the two other players [probability $p_1 + (1 - p_1)p_3 = p_1 + p_3 - p_1p_3$]. Thus, the probability of winning the tournament is $p_2(p_1 + p_3 - p_1p_3)$.
